SUMMARY

Electrical Engineering student with hands-on experience through academic projects and professional work environments. Strong problem-solving, teamwork, and leadership skills, with the ability to learn quickly and take on responsibilities in fast-paced settings. Comfortable working on both technical and practical challenges and looking to contribute to an engineering team while continuing to develop professionally.

EDUCATION

Concordia University - 62 credits completed

BEng Electrical Engineering Co-op

Montreal, Quebec

January 2025 - Expected 2029

International Baccalaureate Diploma

Enko La Gaieté

Yaounde, Cameroun

September 2021 – June 2024

EXPERIENCE

Supervisor

BulkBarn

Montreal, Quebec

October 2025 - June 2026

- Supervised and supported team members to maintain efficient store operations and customer service.
- Opened and closed the store, handled customer concerns, and maintained organization in a fast-paced environment.
- Responsible for preparing and sending daily revenue and sales reports in Excel to store management.

PROJECTS

AI Resume Parser | Python, Machine Learning

June 2026

- Developed a **Python-based** resume parser that extracts skills, clusters candidates, and ranks resumes based on job-related keywords.
- Used TF-IDF, clustering, and automated scoring to generate ranked results in CSV format.
- Source code available on <https://github.com/EthanDooh-gif/resume-checker>

EGIANT | Arduino, C++, WiFi-Controlled Smart Vehicle, RemoteXY

November 2025

- Developed a WiFi-controlled robotic vehicle using an ESP32, RemoteXY, PWM motor control, and joystick-based steering.
- Integrated and debugged hardware/software components including motor drivers, wireless communication, and 3D-printed parts designed in Blender.
- Achieved **5th place out of 32 teams** in the Formula WIEE engineering competition.
- Source code available on <https://github.com/EthanDooh-gif/EGiant-RemoteXY.git>

Twilight Lamp Simulation Using Photoresistor | Arduino UNO

March 2024

- Designed and programmed an automatic lighting system using an Arduino UNO and photoresistor.
- Collected and analyzed real-time sensor data using analog inputs and serial monitoring while applying voltage-divider principles. **Research Paper Photoresistor**
- Source code available on <https://github.com/EthanDooh-gif/Twilight-Lamp-with-photoresistor.git>

Optical Disc Storage Research | Physics, Data Analysis, Experimental Design

March 2024

- Directed a study comparing DVD and Blu-ray technologies to determine how laser wavelength and track spacing affect storage density.
- Designed a diffraction-based method, analyzed data, and evaluated measurement uncertainty and error. **Research Paper Optics**

TECHNICAL SKILLS

Programming : Java • ARM Assembly • C# • Python • C++ • MATLAB

Hardware & Embedded : Oscilloscope • Multimeter • Function Generator • Wattmeter • Arduino

Tools & Software : Excel • Eclipse • Visual Studio Code • Blender • LTSpice • GitHub

Operating Systems : Windows 10/11 • Linux • MacOS

Languages : French – native (written and spoken) • English – fluent (written and spoken)
